Telebelt Hopper options

Putzmeister Telebelts offer many hopper options to fit your specific job needs. In addition to the standard folding hopper, five other options are available.

- Standard Folding Hopper
- Rock Hopper
- Rock Hopper Steel Grate Option
- Front-end Loader Hopper
- Low Profile Hopper
- Side Loading Channels

Standard Folding Hopper

Ideal for concrete placement.

Facilitates easy setup.

Side panels fold into feed conveyor and end panels connect with linchpins.

Easy access for ready mix trucks from three sides of hopper.

Rock Hopper

Place tough materials with large loaders.

Large, 3 cubic yard capacity and wide 72 inch by 120 inch top opening and adjustable legs.

Combine the rock hopper with a low profile hopper for even greater efficiency.

Recommended for use with low profile hopper or side loading channels.

Rock Hopper Steel Grate Option

Easily added to the standard rock hopper.

Prevents the introduction of oversized material into the hopper.

Adjustable angle of the grate allows oversized material to slide off the grate and does not restrict volume.

Front-end Loader Hopper

Ideal for loose, bulk material.

Large funnel shaped aluminum hopper handles wide bucket loads and large capacities to 0.8 yd³.

Ideal with skid steer loaders or track hoes.

Can be hauled on the tray behind the cab of a TB 110.

Low Profile Hopper

Combine the low profile hopper with the rock hopper or soil hopper – your ideal choice for jobs that require high output using large loaders.

8-inch capacity above rails.

Aluminum hopper for use with dump trucks equipped with coal chute doors.

Side Loading Channels

Highly resistant to impact.

3.5 feet of extra hopper length to guide material on belt.

No front gate panel restriction.

Side loading channels are strongly recommended when using a rock hopper.
